Resume Fit & Gap Analysis

Target Role: Senior Data & AI Engineer at AI Technologies
ATS Compatibility Score: 40/100
Missing Skills / Keywords: None

Tailored Improvement Steps:
1. Add a dedicated "Technical Experience" section that lists all relevant tools and frameworks, explicitly mentioning LangGraph, Docker, and Agentic Workflows. 2. Quantify your data■science work: include metrics such as model accuracy, speed improvements, or business impact. 3. Highlight any projects or roles where you used Docker or orchestrated micro■services. 4. Emphasize your communication skills by noting stakeholder presentations, cross■team collaborations, or documentation you produced. 5. Re■order the resume to put the most relevant data■science experience first, followed by administrative roles. 6. Use the exact keywords from the JD (e.g., “Senior Data & AI Engineer”, “Python”, “FastAPI”, “Docker”, “Agentic Workflows”) to pass ATS filters. 7. If you have any certifications or training in Docker, LangGraph, or AI workflow orchestration, list them prominently. 8. Consider adding a brief summary that states you have 3+ years of hands■on data■science and AI engineering experience, aligning with the job requirement.
